Dundee water customer:

A couple of years ago it became a requirement that the city complete a survey of all service line materials, the concern that they may be made of lead materials.

The city of Dundee has completed a survey to detect lead water services from the water main to the meter and we are pleased to announce that we do not have lead services in our system.

Several methods were used to determine the materials used.

1. Looking at the pipe itself when we were changing out water meters
2. Sub-division maps that showed the material used
3. Institutional knowledge, after working for the city for 24 years, I can as a matter of fact say that I have never seen a lead service line!

If you want to know what material your service line is made of, feel free to call and we can provide that information.

Thank you!
